

Scaffold and Insulation Maintenance Contract

KEMSLEY PAPER MILL

Planned Maintenances and Shutdowns

Kemsley Mill has an annual production capacity of around 800,000 tonnes and is the second biggest recovered fiber-based paper operation in Europe.

DS Smith invested over £100m to purchase and rebuild PM6 to make lightweight corrugated case material (CCM). Kemsley Mill produces Light Medium, the first recycled lightweight paper manufactured in the UK.

Alltask provides an ongoing maintenance contract, offering Scaffold and Insulation

services 24 hours a day, 7 days a week, 365 days a year.

As a major UK insulation contractor, Alltask can provide a wide range of insulation services for projects of all shapes and sizes.

The contract involves one planned shutdown per week involving up to 15 operatives outside of the shutdowns.

Alltask supports the ongoing needs of the mill on a day-to-day basis with a fluctuating labour force ranging from four

to eight operatives. All operatives hold a CCNSG Safety Passport and are Confined Space trained. Alltask also supports the mill with an 'out of hours' call-out system with a guaranteed response time of 2 hours. All scaffolds are erected to a bespoke design or TG20 compliance sheet.

Alltask can provide scaffolding and insulation solutions and services ranging from a 24-hour call out to significant outages, including term maintenance and shutdown support, whether planned or emergency.
