

Grade II Listed Building | Strand, London

BUSH HOUSE

Specialist Access Solutions for the Redevelopment of a Historic Landmark

Bush House is a Grade II listed landmark on the Strand, originally constructed between 1925 and 1935 and formerly home to the BBC World Service. Its Portland stone façade and historic significance make it one of London's most recognisable buildings.

Alltask is supporting the redevelopment of the Southwest Wing at Bush House, delivering complex scaffolding and access solutions for our client Kier Construction as part of a wider refurbishment programme.

Scope of Works

Our works include the design, installation and management of a full-height, fully wrapped scaffold to all elevations of the Southwest Wing. The scaffold provides safe and secure access to facilitate:

- Portland stone cleaning and façade restoration
- Full window replacement works
- Roof-level access for mechanical and structural upgrades

The scaffold arrangement incorporates

multiple access lifts and loading bays, ensuring efficient material handling while maintaining strict segregation and public protection within this busy central London location.

Access and Protection Measures

Given the listed status of the building and the constrained urban environment, careful planning and coordination were required throughout. The access solution includes:

- Fully wrapped façade scaffolding for environmental and public protection
- Secure street-level protections to maintain pedestrian safety
- Bespoke roof-level scaffolding to support the removal of existing plant and installation of a new high-efficiency plant room
- Temporary roof structures installed to safeguard the building during refurbishment and structural works

Internal access scaffolding has also been installed to support works within the existing structure, maintaining flexibility as the project progresses.

Wider Development

Alongside the refurbishment works, the redevelopment of Bush House includes the creation of The King's Agora—a new circular, 360-degree immersive lecture space designed to become a focal point for students. Alltask's access solutions play a key role in enabling these transformational works within the historic building.

Outcome

Alltask's engineered access solutions are enabling refurbishment works to be carried out safely and efficiently, while respecting the historic fabric of this landmark building. The project demonstrates our experience in delivering complex scaffolding solutions on listed structures in live, high-profile environments.
